DIGIVOTE® III

Software DVIII interactive professional
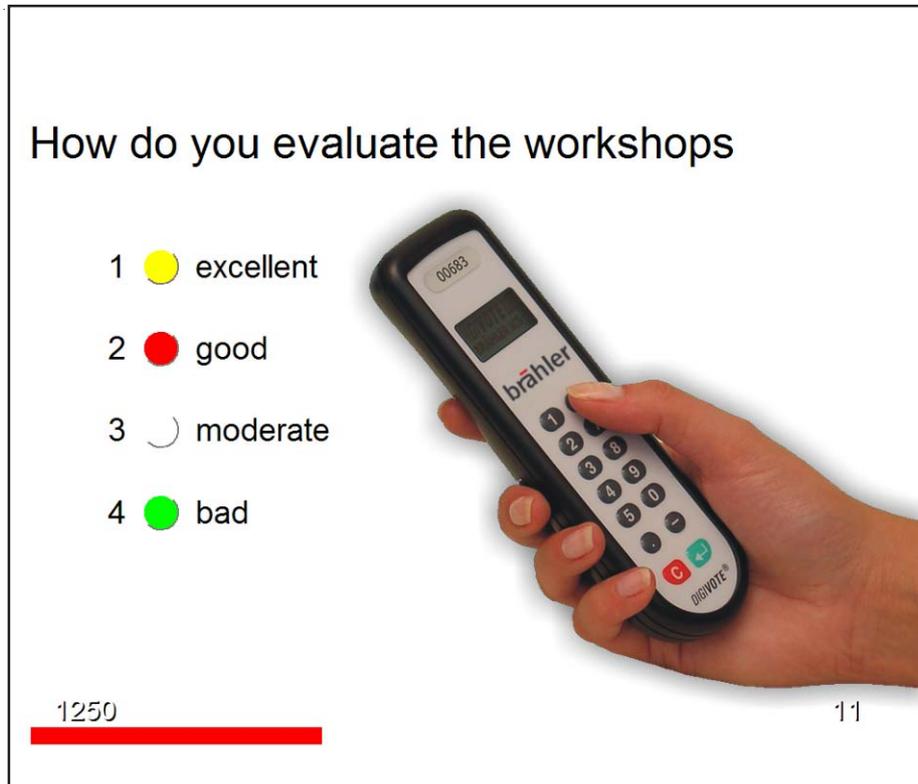

How do you evaluate the workshops

1 excellent
2 good
3 moderate
4 bad

1250   11

Description

Digivote interactive professional provides a powerful way of creating interactive presentations and training sessions.

The user friendly interface of Digivote offers a rapid and easy tool to create a sequence of documents and questions. Although a session is prepared in advance Digivote lets the speaker modify the sequence of the projections on the spot. This flexibility makes it possible to adapt the session to the specific needs of the audience or to evaluate the learning effect of the session.

The transponder TR30 processes all DIGIVOTE®III VD30 voting unit responses. It operates more than 10,000 units on one single radio channel.

Digivote runs as a Windows* application, therefore you can import data (e.g. names, questions) from other programs like Word*, Excel*. Also you may export data to edit these in other programs.

Features
